

Artificial Intelligence Overview

Generated for testing Smart Doc Q&A.

Page 1: Introduction to AI

Artificial Intelligence (AI) refers to the simulation of human intelligence in machines that are programmed to think like humans and mimic their actions. The term may also be applied to any machine that exhibits traits associated with a human mind such as learning and problem-solving.

Page 2: Machine Learning

Machine Learning (ML) is a subset of artificial intelligence. It focuses on the use of data and algorithms to imitate the way that humans learn, gradually improving its accuracy.

Page 3: Deep Learning

Deep Learning is a specialized subset of Machine Learning that uses multi-layered artificial neural networks to deliver state-of-the-art accuracy in tasks like image detection, speech recognition, and natural language processing.
